3. On Page Optimization for the website

On-page SEO (or on-site SEO) is the practice of optimizing web pages for specific keywords in order to improve search visibility and traffic. It involves aligning page-specific elements like title tags, headings, content, and internal links with keywords. We will

work on below on page factors for you.

- Keyword in the title tag
- Keyword in meta description tag
- Keyword in H1 tag
- Using keywords in the pages
- The length of the content
- Duplicate content
- Canonical tag
- Image Optimization
- Content Updates
- Outbound links
- Internal links
- Keyword in URL
- Sitemap
- Domain trust
- Mobile optimized site
- Google Search Console integration
- Google Analytics Integration
- Structural Data (Schema)
- Website Speed
- Content Optimization
- On Page Blog Post

4. Off Page Optimization of the Website

When ranking your pages, Google looks at factors outside of your site as well. Here are some key ones:

- The number of linking domains
- The number of linking pages
- Domain Authority of linking page
- Link relevancy
- Authority of linking domain
- Links from a homepage
- A number of do follow vs. nofollow links
- The diversity of link types
- Contextual links
- Link anchor
